Notes on draft status

December 29, 2010: This is a first draft of HITSP/IHE/HL7 implementation guide consolidation for C32 and CCD. This draft includes all template sections defined in C83, some of which are not part of C32 summaries. The next draft will limit content to templates used in C32.

Overview

This implementation guide is generated from UML models developed in the Open Health Tools (OHT) Model-Driven Health Tools (MDHT) project. The HITSP specifications have been formalized into computational models expressed in UML. These models are used by automated tooling to generate this publication, plus validation tools and Java libraries for implementers.

This document combines specifications from several HITSP documents, as summarized in the following sections. For the authoritative source, please refer to the approved specifications from HITSP.

C32 Patient Summary

The HITSP Summary Documents Using HL7 Continuity of Care Document (CCD) Component describes the document content summarizing a consumer's medical status for the purpose of information exchange. The content may include administrative (e.g., registration, demographics, insurance, etc.) and clinical (problem list, medication list, allergies, test results, etc) information. Any specific use of this Component by another HITSP specification may constrain the content further based upon the requirements and context of the document exchange. This specification defines content in order to promote interoperability between participating systems. Any given system creating or consuming the document may contain much more information than conveyed by this specification. Such systems may include Personal Health Record Systems (.1.s), Electronic Health Record Systems (EHRs), Practice Management Applications and other persons and systems as identified and permitted.

This Component is essentially a subset of the healthcare data that has been developed for specific business Use Cases. This subset contains the minimum critical or pertinent medical information sections as specified by the business case. Information conveyed according to the Component Construct is a representative extract of the information available on the creating system. The information in the HITSP Summary Documents Using HL7 Continuity of Care Document (CCD) Component and the creating systems must be consistent. Furthermore there should be no data elsewhere in the creating system that would contradict the meaning of any data in this construct. The expectation is that consuming systems will be able to use this specification as a source of information to input and/or update information in their instantiation of the healthcare record. This specification does not define the policies applicable to the import of this information.

It is anticipated and desirable that some implementers of the HITSP Summary Documents Using HL7 Continuity of Care Document (CCD) Component will want to add data and sections to permit greater communication between systems. The underlying standards (primarily HL7 CCD – Continuity of Care Document) have additional modules that may serve such purposes. This practice is beyond the scope of this HITSP Component. Implementers should be aware that they must assume that receivers of the document may only be able to view or process content modules as described in this specification, and may not be able to use the additional modules in the document. This means that the HITSP Summary Documents Using HL7 Continuity of Care Document (CCD) Component must be able to stand-alone. Applications may wish to display the document in two different user-selected views, one of which is restricted to the minimal dataset contents of this component. Adding optional sections and data elements should not generate errors. Optional data should be used if understood by the receiving system, but must not change the meaning of the document.

This Component refers to the HITSP 2008 work cycle. It expands upon the prior version of the specification for a consumer's registration/medication history information to include content to support the consumer's access to clinical information, medication management activities and supportive information for quality of care assessment.

C83 Content Modules

The purpose of the Healthcare Information Technology Standards Panel (HITSP) CDA Content Modules Component is to define the library of Components that may be used by CDA-based constructs developed by HITSP and others in standards based exchanges. The Components are organized into modules to simplify navigation. These modules are organized along the same principals as the HL7 Continuity of Care Document.

The data elements found in these modules are based on HL7 CDA Implementation Guides and the IHE PCC Technical Framework Volume II, Release 5 and its related supplements. These guides contain specifications for document sections that are consistent with all clinical documents currently selected for HITSP constructs.

C80 Clinical Document and Message Terminology

The purpose of the Health Information Technology Standards Panel (HITSP) Clinical Document and Message Terminology Component is to define the vocabulary for either document-based or message-based HITSP constructs such as Clinical Document Architecture (CDA) documents, HL7 V2 messages, etc. For more in-depth information about how this Component relates to other HITSP constructs, see HITSP/TN901 Clinical Documents.

Approach

Working with an initial portion of the data provides the opportunity to work with the data from the perspective of the underlying model and electronic format and to explore many design issues thoroughly. Taking this as an initial step ensures that the data set developers and standards community can reach consensus prior to the larger commitment of time that would be required to bring the full data set into standard format.

This project supports reusability and ease of data collection through a standard data representation harmonized with work developed through Health Information Technology Expert Panel (HITEP), balloted through Health Level Seven (HL7) and/or recognized by the Health Information Technology Standards Panel (HITSP).

This implementation guide (IG) specifies a standard for electronic submission of NCRs in a Clinical Document Architecture (CDA), Release 2 format.

Scope

TODO: scope of this implementation guide.

Audience

The audience for this document includes software developers and implementers who wish to develop...

Organization of This Guide

The requirements as laid out in the body of this document are subject to change per the policy on implementation guides (see section 13.02" Draft Standard for Trial Use Documents" within the HL7 Governance and Operations Manual, http://www.hl7.org/documentcenter/public/membership/HL7_Governance_and_Operations_Manual.pdf).

Templates

Templates are organized by document (see Document Templates), by section (see Section Templates), and by clinical statements (see Clinical Statement Templates). Within a section, templates are arranged hierarchically, where a more specific template is nested under the more generic template that it conforms to. See Templates by Containment for a listing of the higher level templates by containment; the appendix Templates Used in This Guide includes a table of all of the templates Organized Hierarchically.

Vocabulary and Value Sets

Vocabularies recommended in this guide are from standard vocabularies. When SNOMED codes are used, rules defined in Using SNOMED CT in HL7 Version 3 are adhered to. In many cases, these vocabularies are further constrained into value sets for use within this guide. Value set names and OIDs are summarized in the table Summary of Value Sets. Each named value set in this summary table is stored in a template database that will be maintained by CHCA.

Use of Templates

When valued in an instance, the template identifier (`templateId`) signals the imposition of a set of template-defined constraints. The value of this attribute provides a unique identifier for the templates in question.

Originator Responsibilities

An originator can apply a `templateId` to assert conformance with a particular template.

In the most general forms of CDA exchange, an originator need not apply a `templateId` for every template that an object in an instance document conforms to. This implementation guide asserts when `templateIds` are required for conformance.

Recipient Responsibilities

A recipient may reject an instance that does not contain a particular `templateId` (e.g., a recipient looking to receive only CCD documents can reject an instance without the appropriate `templateId`).

A recipient may process objects in an instance document that do not contain a `templateId` (e.g., a recipient can process entries that contain Observation acts within a Problems section, even if the entries do not have `templateIds`).

Conventions Used in This Guide

Conformance Requirements

Conformance statements are grouped and identified by the name of the template, along with the `templateId` and the context of the template (e.g., ClinicalDocument, section, observation), which specifies the element under constraint. If a template is a specialization of another template, its first constraint indicates the more general template. In all cases where a more specific template conforms to a more general template, asserting the more specific template also implies conformance to the more general template. An example is shown below.

Template name

```
[<type of template>: templateId <XXXX.XX.XXX.XXX>]
```

Description of the template will be here

1. Conforms to <The template name> Template (templateId: XXXX<XX>XXX>YYY).
2. **SHALL** contain [1..1] @classCode = <AAA> <code display name> (CodeSystem: 123.456.789 <XXX> Class) **STATIC** (CONF:<number>).
3.

Figure 1: Template name and "conforms to" appearance

The conformance verb keyword at the start of a constraint (**SHALL** , **SHOULD** , **MAY** , etc.) indicates business conformance, whereas the cardinality indicator (0..1, 1..1, 1..*, etc.) specifies the allowable occurrences within an instance. Thus, " **MAY** contain 0..1" and " **SHOULD** contain 0..1" both allow for a document to omit the particular component, but the latter is a stronger recommendation that the component be included if it is known.

The following cardinality indicators may be interpreted as follows:

- 0..1 as zero to one present
- 1..1 as one and only one present
- 2..2 as two must be present
- 1..* as one or more present
- 0..* as zero to many present

Value set bindings adhere to HL7 Vocabulary Working Group best practices, and include both a conformance verb (**SHALL**, **SHOULD**, **MAY**, etc.) and an indication of **DYNAMIC** vs. **STATIC** binding. The use of **SHALL** requires that the component be valued with a member from the cited value set; however, in every case any HL7 "null" value such as other (OTH) or unknown (UNK) may be used.

Each constraint is uniquely identified (e.g., "CONF:605") by an identifier placed at or near the end of the constraint. These identifiers are not sequential as they are based on the order of creation of the constraint.

1. **SHALL** contain [1..1] component/structuredBody (CONF:4082).
 - a. This component/structuredBody **SHOULD** contain [0..1] component (CONF:4130) such that it
 - a. **SHALL** contain [1..1] Reporting Parameters section (templateId:2.16.840.1.113883.10.20.17.2.1) (CONF:4131).
 - b. This component/structuredBody **SHALL** contain [1..1] component (CONF:4132) such that it
 - a. **SHALL** contain [1..1] Patient data section - NCR (templateId:2.16.840.1.113883.10.20.17.2.5) (CONF:4133).

Figure 2: Template-based conformance statements example

CCD templates are included within this implementation guide for ease of reference. CCD templates contained within this implementation guide are formatted WITHOUT typical **KEYWORD** and **XML** element styles. A WIKI site is available if you would like to make a comment to be considered for the next release of CCD: http://wiki.hl7.org/index.php?title=CCD_Suggested_Enhancements The user name and password are: wiki/wikiwiki. You will need to create an account to edit the page and add your suggestion.

1. The value for "Observation / @moodCode" in a problem observation SHALL be "EVN" 2.16.840.1.113883.5.1001 ActMood STATIC. (CONF: 814).
2. A problem observation SHALL include exactly one Observation / statusCode. (CONF: 815).
3. The value for "Observation / statusCode" in a problem observation SHALL be "completed" 2.16.840.1.113883.5.14 ActStatus STATIC. (CONF: 816).
4. A problem observation SHOULD contain exactly one Observation / effectiveTime, to indicate the biological timing of condition (e.g. the time the condition started, the onset of the illness or symptom, the duration of a condition). (CONF: 817).

Keywords

The keywords SHALL, SHALL NOT, SHOULD, SHOULD NOT, MAY, and NEED NOT in this document are to be interpreted as described in the [HL7 Version 3 Publishing Facilitator's Guide](#):

- **SHALL**: an absolute requirement
- **SHALL NOT**: an absolute prohibition against inclusion
- **SHOULD/SHOULD NOT**: valid reasons to include or ignore a particular item, but must be understood and carefully weighed
- **MAY/NEED NOT**: truly optional; can be included or omitted as the author decides with no implications

XML Examples

XML samples appear in various figures in this document in a fixed-width font. Portions of the XML content may be omitted from the content for brevity, marked by an ellipsis (...) as shown in the example below.

```
<ClinicalDocument xmlns='urn:hl7-org:v3'>
...
</ClinicalDocument>
```

Figure 4: ClinicalDocument example

XPath expressions are used in the narrative and conformance requirements to identify elements because they are familiar to many XML implementers.

DOCUMENT TEMPLATES

Topics:

- [Patient Summary](#)
- [Unstructured Document](#)

This section contains the document level constraints for CDA documents that are compliant with this implementation guide.

Patient Summary

[ClinicalDocument: templateId 2.16.840.1.113883.3.88.11.32.1]

This Component describes the document content that summarizes a consumer's medical status for the purpose of health information exchange. While an EHR or PHR system can contain much more information, this Component only deals with the summary information to be exchanged between such systems as established as requirements described in AHIC Use Cases.

1. **SHALL** conform to *CCD Continuity Of Care Document* template (templateId: 2.16.840.1.113883.10.20.1)
2. **SHALL** conform to *CDT General Header Constraints* template (templateId: 2.16.840.1.113883.10.20.3)
3. **SHALL** conform to *IHE Medical Document* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.1.1)
4. **SHALL** contain exactly one [1..1] **code** (CONF-HP-21)
 - Specifies the type of the clinical document.
5. **SHALL** contain exactly one [1..1] **languageCode** (CONF-HP-24)
6. **SHALL** contain exactly one [1..1] **realmCode/@code**="US" (CONF-HP-15)
7. **SHALL** contain exactly one [1..1] **typeId** (CONF-HP-16)
 - The clinical document type ID identifies the constraints imposed by CDA R2 on the content, essentially acting as a version identifier.
8. **SHALL** contain exactly one [1..1] **id** (CONF-HP-17)
 - The ClinicalDocument/id element is an instance identifier data type (see HL7 Version 3 Abstract Data in Section 5 REFERENCES). The root attribute is a UUID or OID. The root uniquely identifies the scope of the extension. The root and extension attributes uniquely identify the document.
9. **SHALL** contain exactly one [1..1] **title** (CONF-HP-22)
 - Specifies the local name used for the document. Note that the title does not need to be the same as the display name provided with the document type code. For example, the display name provided by LOINC® as an aid in debugging may be "HISTORY AND PHYSICAL." The title can be localized, as appropriate.
10. **SHALL** contain exactly one [1..1] **effectiveTime** (CONF-HP-23)
 - Specifies the creation time of the document. All documents authored by direct input to a computer system should record an effectiveTime that is precise to the second. When authored in other ways, for example, by filling out a paper form that is then transferred into an EHR system, the precision of effectiveTime may be less than to the second.
11. Contains exactly one [1..1] **confidentialityCode**
 - Specifies the confidentiality assigned to the document. This specification provides no further guidance beyond CDA R2 on documents with respect to the vocabulary used for confidentialityCode, nor treatment or implementation of confidentiality.
12. **SHOULD** contain exactly one [1..1] **component** (CONF-140), such that
 - a. Contains exactly one [1..1] *Problem Section* (templateId: 2.16.840.1.113883.10.20.1.11)
13. **SHOULD** contain exactly one [1..1] **component**, such that
 - a. Contains exactly one [1..1] *Family History Section* (templateId: 2.16.840.1.113883.10.20.1.4)
14. **SHOULD** contain exactly one [1..1] **component**, such that
 - a. Contains exactly one [1..1] *Social History Section* (templateId: 2.16.840.1.113883.10.20.1.15)
15. **SHOULD** contain exactly one [1..1] **component**, such that
 - a. Contains exactly one [1..1] *Alerts Section* (templateId: 2.16.840.1.113883.10.20.1.2)
16. **SHOULD** contain exactly one [1..1] **component** (CONF-388), such that
 - a. Contains exactly one [1..1] *Results Section* (templateId: 2.16.840.1.113883.10.20.1.14)

17. SHOULD contain exactly one [1..1] **component**, such that

- a. Contains exactly one [1..1] *Procedures Section* (templateId: 2.16.840.1.113883.10.20.1.12)

18. SHOULD contain exactly one [1..1] **component**, such that

- a. Contains exactly one [1..1] *Encounters Section* (templateId: 2.16.840.1.113883.10.20.1.3)

19. SHOULD contain exactly one [1..1] **component**, such that

- a. Contains exactly one [1..1] *Plan Of Care Section* (templateId: 2.16.840.1.113883.10.20.1.10)

20. SHOULD contain exactly one [1..1] **component**, such that

- a. Contains exactly one [1..1] *Immunizations Section* (templateId: 2.16.840.1.113883.10.20.1.6)

21. SHOULD contain exactly one [1..1] **component** (CONF-381), such that

- a. Contains exactly one [1..1] *Vital Signs Section* (templateId: 2.16.840.1.113883.10.20.1.16)

22. SHOULD contain exactly one [1..1] **component**, such that

- a. Contains exactly one [1..1] *Medical Equipment Section* (templateId: 2.16.840.1.113883.10.20.1.7)

23. SHOULD contain exactly one [1..1] **component**, such that

- a. Contains exactly one [1..1] *Functional Status Section* (templateId: 2.16.840.1.113883.10.20.1.5)

24. SHOULD contain exactly one [1..1] **component**, such that

- a. Contains exactly one [1..1] *Advance Directives Section* (templateId: 2.16.840.1.113883.10.20.1.1)

25. SHOULD contain exactly one [1..1] **component**, such that

- a. Contains exactly one [1..1] *Payers Section* (templateId: 2.16.840.1.113883.10.20.1.9)

26. MAY contain exactly one [1..1] **component** (CONF-15), such that

- a. Contains exactly one [1..1] *Purpose Section* (templateId: 2.16.840.1.113883.10.20.1.13)

27. Contains at least one [1..*] **recordTarget**, where its type is *Record Target*

28. Contains at least one [1..*] **author**, where its type is *Author*

29. Contains exactly one [1..1] **custodian**, where its type is *Custodian*

30. Contains exactly one [1..1] **component**, where its type is *Component2*

31. Contains at least one [1..*] **author**, such that

- The author element represents the creator of the clinical document. If the role of the actor is the entry of information from his or her own knowledge or application of skills, that actor is the author. If one actor provides information to another actor who filters, reasons, or algorithmically creates new information, then that second actor is also an author, having created information from his or her own knowledge or skills. However, that determination is independent from the determination of the first actor's authorship.

32. Contains zero or one [0..1] **dataEnterer**, such that

- The dataEnterer element represents the person who transferred the information from other sources into the clinical document, where the other sources wrote the content of the note. The guiding rule of thumb is that an author provides the content found within the header or body of the document, subject to their own interpretation. The dataEnterer adds information to the electronic system. A person can participate as both author and dataEnterer.

If the role of the actor is to transfer information from one source to another (e.g., transcription or transfer from paper form to electronic system), that actor is considered a dataEnterer.

33. Contains exactly one [1..1] **custodian**, such that

- Based on the CDA R2 constraints (Section 4.2.2.3 of the CDA Normative Web Edition. See Section 5 REFERENCES), the custodian element is required and is the custodian of the clinical document.

34. Contains zero or more [0..*] **informationRecipient**, such that

- **informationRecipient**, when used in the context of a referral or request for consultation, this records the intended recipient of the information at the time the document is created. The intended recipient may also be the health chart of the patient, in which case the receivedOrganization is the scoping organization of that chart.

35. Contains zero or one [0..1] **legalAuthenticator**, such that

- The legalAuthenticator element identifies the legal authenticator of the document and must be present if the document has been legally authenticated. Based on local practice, clinical documents may be released before legal authentication. This implies that a clinical document that does not contain this element has not been legally authenticated.

The act of legal authentication requires a certain privilege be granted to the legal authenticator depending upon local policy. All clinical documents have the potential for legal authentication, given the appropriate credentials.

Local policies may choose to delegate the function of legal authentication to a device or system that generates the clinical document. In these cases, the legal authenticator is a person accepting responsibility for the document, not the generating device or system.

36. Contains zero or more [0..*] authenticator, such that

- The authenticator identifies the participant who attested to the accuracy of the information in the document.

Automated systems, such as a PHR, that allow a clinical document to be generated need to give special consideration to authentication permissions because the information contained in the document may come from sources or contain information that the author cannot validate.

37. MAY contain zero or one [0..1] component (C32-[CT1-1]), such that

- a. Contains exactly one [1..1] *Advance Directives Section* (templateId: 2.16.840.1.113883.3.88.11.83.116)

38. MAY contain zero or one [0..1] component (C32-[CT1-2]), such that

- a. Contains exactly one [1..1] *Allergies Reactions Section* (templateId: 2.16.840.1.113883.3.88.11.83.102)

39. MAY contain zero or more [0..*] component (C32-[CT1-3]), such that

- a. Contains exactly one [1..1] *Comment* (templateId: 2.16.840.1.113883.3.88.11.83.11)

40. MAY contain zero or one [0..1] component (C32-[CT1-4]), such that

- a. Contains exactly one [1..1] *Problem List Section* (templateId: 2.16.840.1.113883.3.88.11.83.103)

41. MAY contain zero or one [0..1] component (C32-[CT1-5]), such that

- a. Contains exactly one [1..1] *Encounters Section* (templateId: 2.16.840.1.113883.3.88.11.83.127)

42. MAY contain zero or one [0..1] component (C32-[CT1-7]), such that

- a. Contains exactly one [1..1] *Immunizations Section* (templateId: 2.16.840.1.113883.3.88.11.83.117)

43. MAY contain zero or one [0..1] component (C32-[CT1-9]), such that

- a. Contains exactly one [1..1] *Payers Section* (templateId: 2.16.840.1.113883.3.88.11.83.101)

44. MAY contain zero or one [0..1] component (C32-[CT1-11]), such that

71. SHALL satisfy: Telephone numbers match the regular expression pattern tel:\+?[-0-9().]+ (CONF-HP-12)

- The telecom element is used to provide a contact telephone number for the various participants that require it. The value attribute of this element is a URL that specifies the telephone number, as indicated by the TEL data type.
- All telephone numbers are to be encoded using a restricted form of the tel: URL scheme. A telephone number used for voice calls begins with the URL scheme tel:. If the number is a global phone number, it starts with a plus (+) sign. The remaining number is made up of the dialing digits and an optional extension and may also contain visual separators.

• [OCL]: -- implemented in Java using XPath selector

• [XPath]: `//*[self::cda:telecom]`

72. SHALL satisfy: At least one dialing digit is present in the phone number after visual separators are removed. (CONF-HP-13)

• [OCL]: -- implemented in Java using XPath selector

• [XPath]: `//*[self::cda:telecom]`

73. SHALL satisfy: If the telephone number is unknown it is represented using the appropriate flavor of null. (CONF-HP-14)

- There is no way to distinguish between an unknown phone number and an unknown e-mail or other telecommunications address. Therefore, the following convention will be used: Any telecom element that uses a flavor of null (has a nullFlavor attribute) is assumed to be a telephone number, which is the only required telecommunications address element within this DSTU.

• [OCL]: -- implemented in Java using XPath selector

• [XPath]: `//*[self::cda:telecom]`

74. SHALL satisfy: The extension attribute of the typeId element is POCD_HD000040. (CONF-HP-16)

• [OCL]: `self.typeId.extension = 'POCD_HD000040'`

75. SHALL satisfy: The id/@root attribute is a syntactically correct UUID or OID. (CONF-HP-17)

76. SHALL satisfy: UUIDs are represented in the form XXXXXXXX-XXXX-XXXX-XXXXXXXXXXXXXXXXXX, where each X is a character from the set [A-Fa-f0-9]. (CONF-HP-18)

77. OIDs are represented in dotted decimal notation, where each decimal number is either 0, or starts with a nonzero digit. More formally, an OID **SHALL** be in the form ([0-2])(.[1-9][0-9]*[0])+. (CONF-HP-19)

- Organizations that wish to use OIDs should properly register their OID root and ensure uniqueness of the OID roots used in identifiers. A large number of mechanisms exist for obtaining OID roots for free or for a reasonable fee. HL7 maintains an OID registry page from which organizations may request an OID root under the HL7 OID root. This page can be accessed at: <http://www.hl7.org/oid>.

Another useful resource lists the many ways to obtain a registered OID Root for free or a small fee anywhere in the world and is located at: <http://www.dclunie.com/medical-image-faq/html/part8.html#UIDRegistration>.

The manner in which the OID root is obtained is not constrained by this DSTU.

78. SHALL satisfy: OIDs are no more than 64 characters in length. (CONF-HP-20)

- OIDs are limited by this specification to no more than 64 characters in length for compatibility with other standards and Implementation Guides.
- [OCL]: `self.id->select((not id.root.ocIsUndefined()) and id.root.size() > 64)`

79. SHALL satisfy: languageCode has the form nn, or nn-CC. (CONF-HP-25)

81. The CC portion languageCode, if present, **SHALL** be an ISO-3166 country code in uppercase. (CONF-HP-27)

82. Both setId and versionNumber **SHALL** be present or both **SHALL** be absent. (CONF-HP-28)

- The ClinicalDocument/setId element uses the instance identifier (II) data type. The root attribute is a UUID or OID that uniquely identifies the scope of the identifier, and the extension attribute is a value that is unique within the scope of the root for the set of versions of the document. See Document Identification, Revisions, and Addenda in Section 4.2.3.1 of the CDA Specification for some examples showing the use of the setId element.

87. A patient/administrativeGenderCode element **SHALL** be present. If unknown, it **SHALL** be represented using a flavor of null. Values for administrativeGenderCode **SHOULD** be drawn from the HL7 AdministrativeGender vocabulary. (CONF-HP-33)

88. The maritalStatusCode, religiousAffiliationCode, raceCode and ethnicGroupCode **MAY** be present. If maritalStatusCode, religiousAffiliationCode, raceCode and ethnicGroupCode elements are present, they **SHOULD** be encoded using the appropriate HL7 vocabularies. (CONF-HP-34)

92. SHALL satisfy: The assignedAuthor/id element is present. (CONF-HP-38)

- [OCL]: `self.author->forAll(author : cda::Author | author.assignedAuthor.id->size() > 0)`

93. SHALL satisfy: An assignedAuthor element contains at least one assignedPerson or assignedAuthoringDevice elements. (CONF-HP-39)

- [OCL]: `not self.dataEnterer.ocIsUndefined() implies not self.dataEnterer.assignedEntity.assignedPerson.ocIsUndefined()`

98. When the informant is a healthcare provider with an assigned role, the informant **SHALL** be represented using the assignedEntity element (CONF-HP-44)

- Assigned health care providers may be a source of information when a document is created. (e.g., a nurse's aide who provides information about a recent significant health care event that occurred within an acute care facility.) In these cases, the assignedEntity element is used.
- TODO: how to determin if informant is a healthcare provider? condition for implementing OCL

99. Allowable values for informant/relatedEntity/@classCode **SHALL** be CON, PRS, CAREGIVER, AGNT or PROV from the RoleClass vocabulary. (CONF-HP-45)

- When the informant is a personal relation, that informant is represented in the relatedEntity element. The code element of the relatedEntity describes the relationship between the informant and the patient.

The relationship between the informant and the patient needs to be described to help the receiver of the clinical document understand the information in the document.

100 When relatedEntity/@classCode is PRS, values in relatedEntity/code **SHALL** come from the HL7 PersonalRelationshipRoleType vocabulary or from SNOMED, any subtype of "Person in the family" (303071001). (CONF-HP-46)

101When an informant is an unrelated person not otherwise specified, the value relatedEntity/@classCode **SHALL** be set to CON to indicate that this person is a contact. (CONF-HP-47)

- A health care provider who does not have an assigned role at the institution may provide information. To record an informant that does not have an assigned role that can be represented within the context of the document, the information will be represented using the relatedEntity element and the value of relatedEntity/@classCode will be set to PROV.

103When the informant is a healthcare provider, the value of relatedEntity/code **SHOULD** be present and indicate the type of healthcare provider. (CONF-HP-49)

Unstructured Document

[ClinicalDocument: templateId 2.16.840.1.113883.3.88.11.62.1]

IMPORTANT NOTE: The HITSP C62 specification does not include a templateId for this document type. The id 2.16.840.1.113883.3.88.11.62.1 is included in this model to support instance validation, but we are designing a solution to allow removal of this Id.

1. **SHALL** conform to *CDT General Header Constraints* template (templateId: 2.16.840.1.113883.10.20.3)
2. **SHALL** conform to *IHE Medical Document* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.1.1)
3. **SHALL** conform to *IHE Scanned Document* template (templateId: 1.3.6.1.4.1.19376.1.2.20)
4. **SHALL** contain exactly one [1..1] **code**
 - Entered by operator or appropriately fixed for scanned content.
5. **SHALL** contain exactly one [1..1] **confidentialityCode**
 - Assigned by the operator in accordance with the scanning facility policy. The notion or level of confidentiality in the header may not be the same as that in the Affinity Domain, but in certain cases could be used to derive a confidentiality value among those specified by the Affinity Domain. Attributes @code and @codeSystem shall be present.
6. **SHALL** contain exactly one [1..1] **effectiveTime**

- Denotes the time at which the original content was scanned. At a minimum, the time shall be precise to the day and shall include the time zone offset from GMT.
7. **SHALL** contain exactly one [1..1] **id**
 - The root attribute shall contain the oid for the document, in which case the extension attribute shall be empty, or an oid that scopes the set of possible unique values for the extension attribute, in which case the extension shall be populated with a globally unique identifier within the scope of the root oid.
 8. **SHALL** contain exactly one [1..1] **languageCode**
 - Denotes the language used in the character data of the wrapper CDA header. If the scanned content, when rendered, is in a language different than that of the header, the language context of the CDA will be overwritten at the body level (see ITI TF-3: 5.2.3.9 ClinicalDocument/component/nonXMLBody for an example). Attribute @code shall be present.
 9. **SHOULD** contain exactly one [1..1] **title**
 - Entered by operator, or possibly can be taken from the scanned content.
 10. **SHALL** contain exactly one [1..1] **typeId**
 11. Contains exactly one [1..1] **custodian**, such that
 - Based on the CDA R2 constraints (Section 4.2.2.3 of the CDA Normative Web Edition. See Section 5 REFERENCES), the custodian element is required and is the custodian of the clinical document.
 12. Contains zero or more [0..*] **informationRecipient**, such that
 - informationRecipient, when used in the context of a referral or request for consultation, this records the intended recipient of the information at the time the document is created. The intended recipient may also be the health chart of the patient, in which case the receivedOrganization is the scoping organization of that chart.
 13. Contains zero or one [0..1] **legalAuthenticator**, such that
 - The legalAuthenticator element identifies the legal authenticator of the document and must be present if the document has been legally authenticated. Based on local practice, clinical documents may be released before legal authentication. This implies that a clinical document that does not contain this element has not been legally authenticated.

The act of legal authentication requires a certain privilege be granted to the legal authenticator depending upon local policy. All clinical documents have the potential for legal authentication, given the appropriate credentials.

Local policies may choose to delegate the function of legal authentication to a device or system that generates the clinical document. In these cases, the legal authenticator is a person accepting responsibility for the document, not the generating device or system.
 14. Contains zero or more [0..*] **authenticator**, such that
 - The authenticator identifies the participant who attested to the accuracy of the information in the document.

Automated systems, such as a PHR, that allow a clinical document to be generated need to give special consideration to authentication permissions because the information contained in the document may come from sources or contain information that the author cannot validate.
 15. Contains at least one [1..*] **recordTarget**, where its type is *Record Target*
 16. Contains exactly one [1..1] **custodian**, where its type is *Custodian*
 17. Contains exactly one [1..1] **component**, where its type is *Component2*
 18. **SHOULD** contain at least one [1..*] **scanOriginalAuthor**, such that
 - a. Contains exactly one [1..1] *Scan Original Author* (templateId: 1.3.6.1.4.1.19376.1.2.20.1)
 19. **SHALL** contain at least one [1..*] **scanningDevice**, such that
 - a. Contains exactly one [1..1] *Scanning Device* (templateId: 1.3.6.1.4.1.19376.1.2.20.2)
 20. **SHALL** contain exactly one [1..1] **scanDataEnterer**, such that
 - a. Contains exactly one [1..1] *Scan Data Enterer* (templateId: 1.3.6.1.4.1.19376.1.2.20.3)
 21. **MAY** contain zero or one [0..1] **legalAuthenticator**, such that
 - Context is left up to the scanning facility to refine in accordance with local policies.

22. MAY contain zero or one [0..1] **documentationOf**, such that

- Used to encode the date/time range of the original content. If the original content is representative of a single point in time then the endpoints of the date/time range shall be the same. Information regarding this date/time range shall be included, if it is known. In many cases this will have to be supplied by the operator.

23. SHALL satisfy: All patient, guardianPerson, assignedPerson, maintainingPerson, relatedPerson, intendedRecipient/informationRecipient, associatedPerson, and relatedSubject/subject elements have a name. (CONF-HP-6)

- [OCL]: -- implemented in Java using XPath selector

24. SHALL satisfy: All patientRole, assignedAuthor, assignedEntity[not(parent::dataEnterer)] and associatedEntity elements have an addr and telecom element. (CONF-HP-7)

25. SHOULD satisfy: All guardian, dataEnterer/assignedEntity, relatedEntity, intendedRecipient, relatedSubject and participantRole elements have an addr and telecom element. (CONF-HP-8)

- [XPath]: *[self::cda:guardian or self::cda:assignedEntity[parent::cda:dataEnterer] or self::cda:relatedEntity or self::cda:intendedRecipient or self::cda:relatedSubject or self::cda:participantRole]

26. SHALL satisfy: All guardianOrganization, providerOrganization, wholeOrganization, representedOrganization, representedCustodianOrganization, receivedOrganization, scopingOrganization and serviceProviderOrganization elements have name, addr and telecom elements. (CONF-HP-9)

- When name, address, or telecom information is unknown and where these elements are required to be present, as with CDA conformance if the information is unknown, these elements will be represented using an appropriate value for the nullFlavor attribute on the element. Legal values according to this specification come from the HL7 NullFlavor vocabulary.
- [OCL]: -- implemented in Java using XPath selector
- [XPath]: *[self::cda:guardianOrganization or self::cda:providerOrganization or self::cda:wholeOrganization or self::cda:representedOrganization or self::cda:representedCustodianOrganization or self::cda:receivedOrganization or self::cda:scopingOrganization or self::cda:serviceProviderOrganization]

27. Times or time intervals found in the ClinicalDocument/effectiveTime, author/time, dataEnterer/time, legalAuthenticator/time, authenticator/time and encompassingEncounter/effectiveTime elements **SHALL** be precise to the day, **SHALL** include a time zone if more precise than to the day, and **SHOULD** be precise to the second. (CONF-HP-10)

- [OCL]: -- implemented in Java using XPath selector
- [XPath]: /cda:ClinicalDocument/cda:effectiveTime | //cda:author/cda:time | //cda:dataEnterer/cda:time | //cda:encompassingEncounter/cda:effectiveTime

28. Times or time intervals found in the asOrganizationPartOf/effectiveTime, asMaintainedEntity/effectiveTime, relatedEntity/effectiveTime, serviceEvent/effectiveTime, ClinicalDocument/participant/time, serviceEvent/

performer/time and encounterParticipant/time **SHALL** be precise at least to the year, **SHOULD** be precise to the day, and **MAY** omit time zone. (CONF-HP-11)

29. SHALL satisfy: Telephone numbers match the regular expression pattern `tel:[+]?[-0-9().,]+` (CONF-HP-12)

- The telecom element is used to provide a contact telephone number for the various participants that require it. The value attribute of this element is a URL that specifies the telephone number, as indicated by the TEL data type.
- All telephone numbers are to be encoded using a restricted form of the tel: URL scheme. A telephone number used for voice calls begins with the URL scheme tel:. If the number is a global phone number, it starts with a plus (+) sign. The remaining number is made up of the dialing digits and an optional extension and may also contain visual separators.

- [OCL]: -- implemented in Java using XPath selector

- [XPath]: `//*[self::cda:telecom]`

30. SHALL satisfy: At least one dialing digit is present in the phone number after visual separators are removed. (CONF-HP-13)

- [OCL]: -- implemented in Java using XPath selector

- [XPath]: `//*[self::cda:telecom]`

31. SHALL satisfy: If the telephone number is unknown it is represented using the appropriate flavor of null. (CONF-HP-14)

- There is no way to distinguish between an unknown phone number and an unknown e-mail or other telecommunications address. Therefore, the following convention will be used: Any telecom element that uses a flavor of null (has a nullFlavor attribute) is assumed to be a telephone number, which is the only required telecommunications address element within this DSTU.

- [OCL]: -- implemented in Java using XPath selector

- [XPath]: `//*[self::cda:telecom]`

32. SHALL satisfy: The extension attribute of the typeId element is POCD_HD000040. (CONF-HP-16)

- [OCL]: `self.typeId.extension = 'POCD_HD000040'`

33. SHALL satisfy: The id/@root attribute is a syntactically correct UUID or OID. (CONF-HP-17)

34. SHALL satisfy: UUIDs are represented in the form XXXXXXXX-XXXX-XXXX-XXXXXXXXXXXXXXXX, where each X is a character from the set [A-Fa-f0-9]. (CONF-HP-18)

35. OIDs are represented in dotted decimal notation, where each decimal number is either 0, or starts with a nonzero digit. More formally, an OID **SHALL** be in the form $(([0-2])(.[1-9][0-9]^*(0)))+$. (CONF-HP-19)

- Organizations that wish to use OIDs should properly register their OID root and ensure uniqueness of the OID roots used in identifiers. A large number of mechanisms exist for obtaining OID roots for free or for a reasonable fee. HL7 maintains an OID registry page from which organizations may request an OID root under the HL7 OID root. This page can be accessed at: <http://www.hl7.org/oid>.

Another useful resource lists the many ways to obtain a registered OID Root for free or a small fee anywhere in the world and is located at: <http://www.dclunie.com/medical-image-faq/html/part8.html#UIDRegistration>.

The manner in which the OID root is obtained is not constrained by this DSTU.

## Assessment And Plan Section

[Section: templateId 2.16.840.1.113883.3.88.11.83.123]

The Assessment and Plan Section contains information about the assessment of the patient's condition and expectations for care including proposals, goals, and order requests for monitoring, tracking, or improving the condition of the patient.

An assessment and plan section varies from the plan of care section defined later in that it includes a physician assessment of the patient condition.

**NOTE :** The assessments described in this section are physician assessments of the patient's current condition, and do not include assessments of functional status, or other assessments typically used in nursing. In Implementation Guides currently selected, when both the assessment and plan are documented, they are included together in a single section documenting both. When the physician assessment is not present, only the plan of care section appears. There are no cases where a physician assessment is provided without a plan.

1. **SHALL** conform to [IHE Assessment And Plan Section](#) template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.1.13.2.5)

## Diagnostic Results Section

[Section: templateId 2.16.840.1.113883.3.88.11.83.122]

The Results section contains the results of observations generated by laboratories, imaging procedures, and other procedures. The scope includes hematology, chemistry, serology, virology, toxicology, microbiology, plain x-ray, ultrasound, CT, MRI, angiography, echocardiography, nuclear medicine, pathology, and procedure observations. The section often includes notable results such as abnormal values or relevant trends, and could contain all results for the period of time being documented.

Laboratory results are typically generated by laboratories providing analytic services in areas such as chemistry, hematology, serology, histology, cytology, anatomic pathology, microbiology, and/or virology. These observations are based on analysis of specimens obtained from the patient and submitted to the laboratory.

Imaging results are typically generated by a clinician reviewing the output of an imaging procedure, such as where a cardiologist reports the left ventricular ejection fraction based on the review of a cardiac echocardiogram.

Procedure results are typically generated by a clinician to provide more granular information about component observations made during a procedure, such as where a gastroenterologist reports the size of a polyp observed during a colonoscopy.

4. **SHALL** contain exactly one [1..1] **title** (CONF-302)
5. **SHALL** contain zero or one [0..1] **text** (CONF-298)

  - a. Contains exactly one [1..1] *Supply Activity* (templateId: 2.16.840.1.113883.10.20.1.34)
7. **SHALL** contain at least one [1..\*] **entry** (C83-[CT-112-2]), such that
  - a. Contains exactly one [1..1] *Medication* (templateId: 2.16.840.1.113883.3.88.11.83.8)

**8. SHOULD** satisfy: Clinical statements include one or more Medication Activity and/or one or more Supply Activity. (CONF-298)

- [OCL]: self.getSubstanceAdministrations()->exists(activity : cda::SubstanceAdministration | activity.ocIsKindOf(ccd::MedicationActivity)) or self.getSupplies()->exists(activity : cda::Supply | activity.ocIsKindOf(ccd::SupplyActivity))

**9. SHALL** satisfy: The absence of known medications is explicitly asserted. (CONF-299)

**10. SHOULD** satisfy: Valued with a case-insensitive language-insensitive string containing 'medication'. (CONF-303)

Possible dosing templates: 1.3.6.1.4.1.19376.1.5.3.1.4.7.1 Normal Dosing, 1.3.6.1.4.1.19376.1.5.3.1.4.8, Tapered Dosing, 1.3.6.1.4.1.19376.1.5.3.1.4.9 Split Dosing, 1.3.6.1.4.1.19376.1.5.3.1.4.10 Conditional Dosing, 1.3.6.1.4.1.19376.1.5.3.1.4.11 Combination Dosing.

- There are a variety of special cases for dosing that need to be accounted for. Most of these special cases involve changing the dosage or frequency over time, or based on some measurement. When the dosage changes, then additional entries are required for each differing dosage.

**12. MAY** satisfy: contains one or more related components (<entryRelationship typeCode='COMP'>, either to handle split, tapered or conditional dosing, or to support combination medications.

- In the first three cases, the subordinate components shall specify only the changed <frequency> and/or <doseAmount> elements. For conditional dosing, each subordinate component shall have a <precondition> element that specifies the <observation> that must be obtained before administration of the dose. The value of the <sequenceNumber> shall be an ordinal number, starting at 1 for the first component, and increasing by 1 for each subsequent component. Components shall be sent in <sequenceNumber> order.

11. **SHALL** satisfy: The 'text' element contains a 'reference' element pointing to the narrative text section of the CDA, rather than duplicate text to avoid ambiguity. (CONF-6.3.4.6.7)

12. **SHALL** satisfy: The time of the comment creation is recorded in the 'time' element when the 'author' element is present. (CONF-6.3.4.6.10)

14. **SHALL** satisfy: The author's and/or the organization's name must be present when the 'author' element is present. (CONF-6.3.4.6.12)
  - [OCL]: not self.author->isEmpty() implies ( self.author->exists( a : cda::Author | ( (not a.assignedAuthor.assignedPerson.ocIsUndefined()) and not a.assignedAuthor.assignedPerson.name->isEmpty() ) or (not a.assignedAuthor.representedOrganization.name->isEmpty() ) ) )
15. Data elements defined elsewhere in the specification **SHALL NOT** be recorded using the Comments Module. (C83-[DE-10-CDA-1])
  - Comments are free text data that cannot otherwise be recorded using data elements already defined by this specification. They are not to be used to record information that can be recorded elsewhere. For example, a free text description of the severity of an allergic reaction would not be recorded in a comment. Instead, it would be recorded using the data element defined in Allergy/Drug Sensitivity.

## Condition

[Act: templateId 2.16.840.1.113883.3.88.11.83.7]

A condition is a clinical statement that a clinician wants to track. It has important patient management use cases (e.g., health records often present the problem list as a way of summarizing a patient's medical history).

1. **SHALL** conform to *CCD Problem Act* template (templateId: 2.16.840.1.113883.10.20.1.27)
2. **SHALL** conform to *IHE Concern Entry* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5.1)
3. **SHALL** conform to *IHE Problem Concern Entry* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5.2)
4. **SHALL** contain exactly one [1..1] **@classCode**= "ACT" *Act* (CodeSystem: 2.16.840.1.113883.5.6 HL7ActClass) (CONF-146)
5. **SHALL** contain exactly one [1..1] **@moodCode**= "EVN" *Event* (CodeSystem: 2.16.840.1.113883.5.1001 HL7ActMood) (CONF-147)
6. **SHALL** contain at least one [1..\*] **id** (CONF-148)
7. **SHALL** contain exactly one [1..1] **code**/@nullFlavor = "NA" *NA (not applicable)* (CONF-149)
8. **SHALL** contain exactly one [1..1] **statusCode**, which **SHALL** be selected from ValueSet *ConcernEntryStatus* **STATIC**

- The statusCode associated with any concern must be one of the following values:

**active:** A concern that is still being tracked. **suspended:** A concern that is active, but which may be set aside. For example, this value might be used to suspend concern about a patient problem after some period of remission, but before assumption that the concern has been resolved. **aborted:** A concern that is no longer actively being tracked, but for reasons other than because the problem was resolved. This value might be used to mark a concern as being aborted after a patient leaves care against medical advice. **completed:** The problem, allergy or medical state has been resolved and the concern no longer needs to be tracked except for historical purposes.

9. **SHALL** contain exactly one [1..1] **effectiveTime**

- The effectiveTime element records the starting and ending times during which the concern was active.

10. **MAY** contain exactly one [1..1] **entryRelationship** (CONF-168), such that

- a. Contains exactly one [1..1] *Episode Observation* (templateId: 2.16.840.1.113883.10.20.1.41)

11. **SHALL** contain at least one [1..\*] **entryRelationship**, such that

- a. Contains **@typeCode**= "SUBJ" *SUBJ (has subject)*

- b. Contains exactly one [1..1] *Condition Entry* (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5)

12. **SHALL** contain one or more entryRelationship (CONF-151)

- [OCL]: not self.entryRelationship->isEmpty()

13. A problem act **MAY** reference a problem observation, alert observation (see section Alerts) or other clinical statement that is the subject of concern, by setting the value for "Act / entryRelationship / @typeCode" to be "SUBJ" 2.16.840.1.113883.5.1002 ActRelationshipType STATIC. (CONF-152)

14. The target of a problem act with Act / entryRelationship / @typeCode="SUBJ" **SHOULD** be a problem observation (in the Problem section) or alert observation (in the Alert section), but **MAY** be some other clinical statement. (CONF-153)

- [OCL]:  

```
self.getEntryRelationshipTargets(vocab::x_ActRelationshipEntryRelationship::SUBJ,
cda::ClinicalStatement)->forall(target : cda::ClinicalStatement | not
target.ocIsUndefined() and
(target.ocIsKindOf(ccd::ProblemObservation) or
target.ocIsKindOf(ccd::AlertObservation)))
```

15. In Problem Section, a Problem Act **SHOULD** contain one or more Problem Observations. (CONF-140)

- [OCL]: self.getSection().ocIsKindOf(ccd::ProblemSection) implies  

```
self.getObservations()
->exists(obs : cda::Observation |
obs.ocIsKindOf(ccd::ProblemObservation))
```

16. In Alert Section, a ProblemAct **SHOULD** contain one or more Alert Observations. (CONF-256)

- [OCL]: self.getSection().ocIsKindOf(ccd::AlertsSection) implies

- [OCL]: self.participant->one(partic : cda::Participant2 |  

```
partic.ocIsKindOf(ccd::PatientAwareness))
```

18. The effectiveTime 'low' element **SHALL** be present. The 'high' element **SHALL** be present for concerns in the completed or aborted state, and **SHALL NOT** be present otherwise.

- [OCL]: not self.effectiveTime.low.ocIsUndefined()  

```
and ((self.statusCode.code = 'completed' or self.statusCode.code =
'aborted') implies not self.effectiveTime.high.ocIsUndefined())
and ((self.statusCode.code <> 'completed' and self.statusCode.code <>
'aborted') implies self.effectiveTime.high.ocIsUndefined())
```

19. This entry **SHALL** contain one or more problem or allergy entries that conform to the specification in section Problem Entry or Allergies and Intolerances.

vocab::x_ActRelationshipEntryRelationship::SUBJ)->isEmpty()
```

21. Each concern **MAY** have 0 or more related references. This **MAY** be any valid CDA clinical statement, and **SHOULD** be an IHE entry template.

## Condition Entry

[Observation: templateId 1.3.6.1.4.1.19376.1.5.3.1.4.5]

This section makes use of the linking, severity, clinical status and comment content specifications defined elsewhere in the technical framework. In HL7 RIM parlance, observations about a problem, complaint, symptom, finding, diagnosis, or functional limitation of a patient is the event (moodCode='EVN') of observing (<observation classCode='OBS'>) that problem. The <value> of the observation comes from a controlled vocabulary representing such things. The <code> contained within the <observation> describes the method of determination from yet another controlled vocabulary.

The basic pattern for reporting a problem uses the CDA <observation> element, setting the classCode='OBS' to represent that this is an observation of a problem, and the moodCode='EVN', to represent that this is an observation that has in fact taken place. The negationInd attribute, if true, specifies that the problem indicated was observed to not have occurred (which is subtly but importantly different from having not been observed). The value of negationInd should not normally be set to true. Instead, to record that there is "no prior history of chicken pox", one would use a coded value indicated exactly that. However, it is not always possible to record problems in this manner, especially if using a controlled vocabulary that does not supply pre-coordinated negations, or which do not allow the negation to be recorded with post-coordinated coded terminology.

1. **SHALL** conform to *CDD Problem Observation* template (templateId: 2.16.840.1.113883.10.20.1.28)
2. **SHALL** conform to *IHE Problem Entry* template (templateId: 1.3.6.1.4.1.19376.1.5.3.1.4.5)
3. Contains exactly one [1..1] **@classCode="OBS"** *Observation* (CodeSystem: 2.16.840.1.113883.5.6 HL7ActClass)
4. **SHALL** contain exactly one [1..1] **@moodCode="EVN"** *Event* (CodeSystem: 2.16.840.1.113883.5.1001 HL7ActMood) (CONF-155)
5. **SHALL** contain at least one [1..\*] **id**
  - The specific observation being recorded must have an identifier (<id>) that shall be provided for tracking purposes. If the source EMR does not or cannot supply an intrinsic identifier, then a GUID shall be provided as the root, with no extension (e.g., <id root='CE1215CD-69EC-4C7B-805F-569233C5E159'/>). At least one identifier must be present, more than one may appear.
6. **SHOULD** contain exactly one [1..1] **code**, which **SHOULD** be selected from ValueSet 2.16.840.1.113883.3.88.12.3221.7.2 Problem Type **STATIC 1**
7. **SHALL** contain exactly one [1..1] **text**
  - The <text> element is required and points to the text describing the problem being recorded; including any dates, comments, et cetera. The <reference> contains a URI in value attribute. This URI points to the free text description of the problem in the document that is being described.

8. **SHALL** contain exactly one [1..1] **statusCode/@code="completed"** (CodeSystem: 2.16.840.1.113883.5.14 HL7ActStatus) (CONF-156, CONF-157)

9. **SHOULD** contain exactly one [1..1] **effectiveTime**

- The <effectiveTime> of this <observation> is the time interval over which the <observation> is known to be true. The <low> and <high> values should be no more precise than known, but as precise as possible. While CDA allows for multiple mechanisms to record this time interval (e.g., by low and high values, low and width, high and width, or center point and width), we are constraining Medical summaries to use only the low/high form. The <low> value is the earliest point for which the condition is known to have existed. The <high> value, when present, indicates the time at which the observation was no longer known to be true. Thus, the implication is made that if the <high> value is specified, that the observation was no longer seen after this time, and it thus represents the date of resolution of the problem. Similarly, the <low> value may seem to represent onset of the problem. Neither of these statements is necessarily precise, as the <low> and <high> values may represent only an approximation of the true onset and resolution (respectively) times. For example, it may be the case that onset occurred prior to the <low> value, but no observation may have been possible before that time to discern whether the condition existed prior to that time. The <low> value should normally be present. There are exceptions, such as for the case where the patient may be able to report that they had chicken pox, but are unsure when. In this case, the <effectiveTime> element shall have a <low> element with a nullFlavor attribute set to 'UNK'. The <high> value need not be present when the observation is about a state of the patient that is unlikely to change (e.g., the diagnosis of an incurable disease).

10. **SHALL** contain exactly one [1..1] **value**, which **SHALL** be selected from ValueSet 2.16.840.1.113883.3.88.12.3221.7.4 Problem **STATIC** 1

- The <value> is the condition that was found. This element is required. While the value may be a coded or an un-coded string, the type is always a coded value (xsi:type='CD'). If coded, the code and codeSystem attributes shall be present. The codeSystem should reference a controlled vocabulary describing problems, complaints, symptoms, findings, diagnoses, or functional limitations, e.g., ICD-9, SNOMED-CT or MEDCIN, or others.

It is recommended that the codeSystemName associated with the codeSystem, and the displayName for the code also be provided for diagnostic and human readability purposes, but this is not required by this profile.

If uncoded, all attributes other than xsi:type='CD' must be absent.

The <value> contains a <reference> to the <originalText> in order to link the coded value to the problem narrative text (minus any dates, comments, et cetera). The <reference> contains a URI in value attribute. This URI points to the free text description of the problem in the document that is being described.

Vital Sign

[Observation: templateId 2.16.840.1.113883.3.88.11.83.14]

These entries are used to record current and relevant historical vital signs for the patient. Vital Signs are a subset of **Results Section**, but are reported in this section to follow clinical conventions.

The differentiation between Vital Signs and Results varies by clinical context. Common examples of vital signs include temperature, height, weight, blood pressure, etc. However, some clinical contexts may alter these common vitals, for example in neonatology "height" may be replaced by "crown-to-rump" measurement.
